Restaurant Management System

2. Project Short Description

This project is about making a system for a restaurant. The main problem in the restaurant is too much customers and also many people want home delivery, so it becomes hard to manage everything properly. So, this system is made to help in that situation.

The system is developed using Java and it will help both customers and admin. Customers can book table online and also order food from home which make it more easy and fast. Also they can choose drinks before coming, so they dont have to wait much time in restaurant.

For admin side, the system will help to manage menu and also check financial reports. It make the work more simple and organized. Overall, this system try to improve customer experience and also help restaurant to run better but it still depend how properly it is used.

3. Features

1. Administrator (System Owner)

- **Menu Management:** Full CRUD (Create, Read, Update, Delete) capabilities to manage food and beverage items.
- **Financial Reporting:** Generate detailed financial reports to track business performance.
- **Predictive Analytics:** Utilize advanced mechanisms to predict future revenue and receive menu item recommendations.
- **Bill & Receipt Generation:** Manage and generate official bills and receipts for customer transactions.
- **Promotional Tools:** Post and manage special offers, discounts, and schemes to attract customers.

2. Members (Registered Customers)

- **User Authentication:** Secure login and registration to access personalized features.
- **Advanced Table Booking:** Check real-time table availability and reserve for specific dates/times.
- **Premium Beverage Selection:** Exclusive ability to reserve specific wine or whiskey choices during the booking process.
- **Order Placement:** Place orders for food and beverages with the option for home delivery.
- **Online Payment:** Securely pay for reservation advances and food orders through the portal.
- **Experience Rating:** Rate and provide feedback on food quality, staff behavior, and restaurant ambience.

3. Visitors (Guest Users)

- **Registration:** Ability to sign up and become a member of the system.
- **Standard Table Booking:** Check availability and reserve tables for a particular date and time.
- **Standard Beverage Choice:** Set expected beverage preferences from the available list during booking.
- **Reservation Management:** Cancel reservations, subject to certain fee based on the cancellation day.
- **Feedback:** Provide ratings and feedback regarding their dining experience.
